

Step 07 — Dynamic fields UI (manual test guide)

Goal: Confirm the field builder UI and reusable dynamic form renderer for company admins, with correct RBAC and live preview.

Maps to: Phase 2 — Dynamic Field Engine (UI)

Do not start Step 08 until every required item passes.

Artifacts:

- Markdown: docs/manual-test-guides/step-07-dynamic-fields-ui.md
- PDF: docs/manual-test-guides/step-07-dynamic-fields-ui.pdf
- Depends on Step 06 API (/api/v1/fields)

Prerequisites

- ☐ Steps 01–06 already passing
- ☐ PostgreSQL running; migrations applied (includes step06_dynamic_fields)
- ☐ Super Admin bootstrap env set in server/.env.local
- ☐ At least one company with a **company admin** (Step 03)
- ☐ Server + client dev servers running

Setup commands

Server:

```
cd finance-management/server
npm install
npx prisma generate
npm run prisma:migrate
npm run dev
```

Client:

```
cd finance-management/client
npm install
npm run dev
```

Open <http://localhost:5173> and sign in as a **company admin**.

Checklist

A. Route access

#	Test	Expected	Pass?
A1	Home as company admin	Shows Custom fields link	[]
A2	Open /fields as company admin	Field builder page loads	[]

A3	Open <code>/fields</code> as normal user	Redirects to home	[]
A4	Open <code>/fields</code> as Super Admin	Redirects to home (no tenant)	[]
A5	Open <code>/fields</code> signed out	Redirects to login	[]

B. Field builder — create

#	Test	Expected	Pass?
B1	Expense tab selected by default	Target = Expense	[]
B2	Add a Text field (label only)	Field appears in list with auto key	[]
B3	Add a Dropdown with choices	Field shows choices in card	[]
B4	Switch to Income tab	Separate list (empty or income-only fields)	[]
B5	Add an income field	Appears only under Income tab	[]

C. Field builder — manage

#	Test	Expected	Pass?
C1	Rename a field	Label updates in list	[]
C2	Disable a field	Badge shows Disabled; hidden from preview	[]
C3	Enable again	Field returns in preview	[]
C4	Move up / down	Sort order changes; list order updates	[]
C5	Delete a field	Removed from list and preview	[]

D. Live preview (reusable renderer)

#	Test	Expected	Pass?
D1	Enabled fields render in preview	Inputs match field types	[]
D2	Edit preview values	JSON preview updates below form	[]
D3	Disabled fields omitted	Not shown in preview	[]
D4	Field order matches sort order	Same order as builder list	[]

Supported preview types: Text, Long text, Number, Currency, Date, Boolean, Dropdown, File (filename only in Step 07).

E. Server sync

After UI actions, confirm API state (Postman or curl as company admin):

#	Test	Expected	Pass?
---	------	----------	-------

E1	GET <code>/api/v1/fields?target=EXPENSE</code>	Matches UI expense fields	[]
E2	Create/update/delete from UI	Audit log shows <code>FieldDefinition</code> entries	[]

F. Negative cases

#	Test	Expected	Pass?
F1	Add dropdown without choices	Validation error shown	[]
F2	Duplicate key for same target	Error message from API	[]

Pass criteria for Step 07

- ☐ All **required** checklist items above pass
- ☐ Company admin can manage fields for Expense and Income targets
- ☐ Live preview uses shared `DynamicFieldForm` component
- ☐ Normal users and Super Admin cannot access `/fields`

When all required items pass: mark related Notion tasks Done, then start **Step 08 — Expense core**.

Quick manual flow

1. Login as company admin
2. Home → **Custom fields**
3. Add text + dropdown expense fields
4. Rename, reorder, disable/enable, delete
5. Confirm live preview updates
6. Switch to Income tab and add one field
7. Check audit trail for field mutations
